Table contains one column (primary key) that can be INT or VARCHAR. If INT then I want to make check on the column and if VARCHAR I don't. I know how to select distinct but I don't know how to do this with CHECK constraint. If I try to use DISTINCT I get the following error: Msg 3721, Level 16, State 3, Line 1 The underlying collation of char data type column 'ID' in table 'table' cannot be specified as 'SQL Latin1 General CP1 CI AS'. I want to select only ID that contains unique string. SELECT DISTINCT ID FROM table WHERE ID = '12345' OR ID = '456' OR ID = '789' EDIT: How can I create such check constraint? It will make sense to assume that all rows with same ID will have same values in VARCHAR column. A: There is no way in SQL Server to make this query work. The error message is telling you exactly what the problem is. There is a collation issue involved, not a constraint. Your ID column is a char, not a varchar. Make it varchar or alter the constraint. A: You could do this: SELECT DISTINCT ID FROM table WHERE ID LIKE '%12345%' OR ID LIKE '%456%' OR ID LIKE '%789%' Toxicokinetics and pharmac

DesignTastic: A multi-page scenario manager for creating a unique design and reuse it in multiple products. DesignTastic allows you to quickly create scenario diagrams for creating product drawings. Motion Chart: Create visualization, mechanical, or documentation graphics that guide users through your application with motion charts. Displayed on the motion track, graphics animate from one page to the next, offering a way to present a dynamic message in a clear and concise manner. Pre-CAD2017: Use the legacy Pre-CAD2017 engine, available in AutoCAD 2017 and before. This allows you to use feature-based interfaces and panels that are based on the legacy engine. New Paint Bucket: Place a paint bucket icon on the screen to select a palette of colors. Select a color based on the attributes of the image on the canvas, such as transparency, type, and size. Change the attributes of the image, such as colors, in the design space. Enhanced Alignment Tools: Align and align objects in two ways, with the use of geometric constraints or by using a technique that precisely aligns objects. VSE (Visible Selection Editor): Add and edit selections from within a project or drawing. Select a shape, such as a circle or rectangle, and make modifications. Click to select an object and modify a property of the object, such as its color. Or drag a selection rectangle to resize the selection. Shape Connectors: Disconnect two or more selected objects and reconnect them after editing the properties of the shapes. The shapes are reconnected as a connected series of paths. You can edit the properties of the shapes, such as color, linetype, and lineweight. CAMO (Collaborative Annotations and Manipulations): Let your co-workers draw or annotate a shape, and make changes to their drawings. Once changes are complete, the user can easily view the annotations and approve or reject the changes. Batch Rename: Use the command-line batch-rename dialog box to bulk change the name of a group of objects in your drawings. You can change up to 1,000 objects at once. Motion Scale: Create a continuous sequence of images. From one image to the next, you can control the speed of the sequence to create the illusion of motion
