All in all, Adobe Photoshop CC is a great, powerful and versatile program that strives to be the finest and most useful paint-and-collage software in the artistic world. Grab it while you can, save yourself some money and learn some excellent new techniques. There have been many reviews of Adobe Photoshop CC, but I've chosen a different path and, in fact, have quite a different approach.. the reason I have chosen a different path is because I am covering Photoshop elements in my next review. I need to share some of my thoughts on what I think you should know when you try Photoshop Elements, and if you choose to skip that over and try Photoshop CC. So what does this have to do with elements? After all, Photoshop is based on Elements, yet I think its features and interface are significantly and notably better. Photoshop Elements is widely used because it contains some of the cheapest Photoshop features, provided you do a little homework first. If you want to stick to the cheap elements, you're instead going to want to check out "Blend" and "Creative Suite 5". Guides, filters and adjustments do all work the exact same way. With Elements, you can take a composite photo of a computer, but then once you put the person in front of it, they don't look real. On the other hand, with Adobe Photoshop, you can take a composite photo, and then you can fix the compositions and move the people easily, and their head will look decent and the background will be totally clean.

If you're in the middle of working on a creative project, you'll often lose the ability to see it clearly as you go. Your creative eye gets lost, your thoughts get scrambled, your energy is sapped, then, when you get back to your computer later, you find a pile of sketches stamped with confusing scribbles. Importing JPG files, even with optimized settings, takes a lot of time. Options like Optimize JPEG Document or Optimize JPEG for Printing can make the file size smaller but may make it unsuitable for simple editing like cutting out a small area. Even the smallest image can take hours to open if it is of decent quality and large. Aside from adding new features, Adobe also upgraded its system requirements for Photoshop. For the software to work, a photo editing application such as Adobe Lightroom, Adobe Camera Raw, or Adobe Photoshop Elements is required. Adobe has partnered with Dell XPS to add a trackpad to the notebook, making it easier to move the cursor with precision. Onscreen tools and the clipboard are enhanced in this update, as well. Adobe has added new gestures to go along with the trackpad and a version of Photoshop for macOS that includes the laptop beyond the camera. A new version of Adobe Scorcher also offers more suited controls for one-button photo compositing. Any German readers, do you use Photoshop for your work? What are your own experiences using the application? (or any other photo editing software) I'd love to hear in the comments.

„Now, listen: if you really want to know what the future will be like, just look at previous futures, and from there we can draw conclusions. Unilateral translation of One country, One language, one language, with no one contradicting it. The whole world will become one big English-speaking country, in which nothing but English will be used. At first the government of that country will claim to be tolerant, which will indeed briefly appear like a good thing. But in the end, that country will have to declare war on its own neighbours because of the severe shortage of labour. Sheer shortage of labour will then lead the government to start a program a fascist type to “improve the race”, meaning improve the quality of the nations’ stock by eliminating the poor, improving the stock of the wealthy nations by marching in on them and taking away their talented workers. Ha-ha-ha, safe and sound. Applause. In such a country, technology will be used to track any person who even looks as if he will eventually become a counter-revolutionary. In such a country, technology will spread into the most private realms of life. In such a country, independent minds will be made illegal and anything contrary to the system of one language, one country, one government, will not be allowed. Human rights will be taken away gradually, and technology will increasingly replace humane feelings in medicine, education, and social care. The world will, at this point, be one friendly group of cooperating nations.“
