Adobe Creative Standards is a set of best practices that help improve the efficiency of the design, advertising & packaging creative industries. It applies to the presentation, development and deployment of creative work initiated in Adobe software. Air's features are incredibly useful to those who make their living online, and it was clearly the most popular response to Adobe's release. This is exciting, considering that the "competitors" to Air are pretty much all Mac apps (in fact, you can run Photoshop Live on a PC, but unfortunately, not on a Mac). One of the most exciting new features is the smart object. You can click and drag on an existing photo and copy it as a new object, which, with a click of a button, can

retain any layer-based properties you have applied such as exposure, colour and perspective. A photoshop tool known as "Levels" allows you to tell Photoshop exactly what a white area should be. We've seen some other cool updates to the program like new strokes. But it's also incredibly important to note that the Photoshop's back-up feature is still a major cloud computing weak link. The highlights of the year include the ability to batch edit: When you move or copy the contents of an individual layer to other layers, Photoshop adjusts them to be positioned on top of the current content of that layer, so you only have to re-invalidate the layers you want to have updated. • Toolset Improvements: The new Photoshop has some neat new tools, including inking, which allows you to add text to a photo, and the new paintbrush, which allows you to apply colour instantly and interactively.
